

Glocal Spring School Program 2021 in Tokyo Tech Design for Humanity – Preservation and Utilization of Water - Application Guide

An intensive training program in problem solving and idea creation to solve world-scale problems for approximately 40 graduate school students from doctoral and master's degree programs, and professional master's degree program and individual workers, with different academic or professional background.

“Glocal” is new internationalization viewpoint that develops an excellent technology and idea from a local scale to a global scale.

This time, under the theme “Design for Humanity: Preservation and Utilization of Water,” we aim to envision projects that contribute to solving “global” issues related to preservation and utilization of water starting from the point of view of “local.”

Participating graduate students from doctoral and master's programs in mixed group, through discussions, activities, modeling, and poster presentation, can acquire the ability of leadership, interdisciplinary knowledge, and communication, to not only lead a team as a researcher or an entrepreneur but also create a collaboration, establish networks with researchers in other specialties, understand the extraprofessional knowledge and a new viewpoint by cultural exchange.

In the final session, each team will participate in poster presentation.

This Glocal School Programs are coordinated by the staff of Tokyo Tech who worked as coach at the Imperial College London - Tokyo Tech Global Fellows Programme in 2018 and 2019.
